RE: New Jersey Turnpike Authority
Engineering Consultant Prequalification

To All Concerned:

To be eligible to submit Expressions of Interest for Engineering, Architectural or Environmental Consulting Services, your firm must be prequalified with the Authority.

All Engineering Consultant Prequalification requests and renewals will be processed electronically through the Authority's CapEx Manager System (CapEx).

To apply for prequalification as a prime consultant, you need to furnish the Authority with information about the firm's history, size, capabilities, filing status (SBE, etc.) and other general information and identify the specialty fields in which you seek to be prequalified. Documentation in support of this request for prequalification must be provided in the format as specified on the PSPQ form. Only those firms which have prequalified for the type of services each project entails will be considered and solicited for Expressions of Interest or Technical Proposals. If you file as an SBE firm, you must submit a copy of an unexpired SBE Certificate issued to your firm by the New Jersey Department of the Treasury's Division of Revenue & Enterprise Services (DORES). Prequalification is not required for subconsultant services.

All required forms and instructions are available on the Authority's website at www.njta.gov as well as the CapEx website. It is required that you use the supplied Authority forms.

The required forms are:

1. Professional Services Prequalification Questionnaire
2. Request for Prequalification – one form for each separate service group/profile code for which you seek prequalification, complete the form and attach the necessary pages to furnish the historical record data (items A through G) in the outlined format.

3. For the most current full year accounting cycle, copies of:
 - a) Audited or independent CPA-reviewed financial statements, in which case, the PSPQ may remain current for 24 months; or
 - b) Compiled or internally prepared financial statements, in which case, the PSPQ may remain current for 12 months.

You are reminded that all corporations, except those incorporated under the N.J. Professional Services Corporation Act (N.J.S.A. 14a: 17-1 et seq.), which furnish professional engineering or surveying services are required by law (N.J.S.A. 45:8-56) to obtain from the N.J. Board of Professional Engineers and Land Surveyors a Certificate of Authorization. A copy of this Certificate or verification that your firm is exempt from this requirement must be included when you apply for prequalification.

Please do not upload brochures, promotional material or any information other than that which is required.

You will be notified by an email from CapEx of prequalification. Consultant prequalification is valid for two years from that date (unless otherwise indicated).

Prior to the expiration of your prequalification, you will be notified electronically through CapEx that your prequalification is about to expire and you will be asked to submit a new request for prequalification. You are also required to inform the Authority and resubmit your request for your prequalification if there is a significant change in the information within the two-year period.

In order to keep your firm's information current in CapEx, and to ensure that prequalification notifications are being sent to the appropriate e-mail address, it is important that you maintain your firm's CapEx vendor profile with the correct e-mail address.

Please also continue to notify us, in writing, of company name changes, address changes, contact person changes, phone number changes, and any other changes necessary for accurate and prompt contact and correspondence with your firm.

If there are questions regarding the process, please contact our CapEx Help Desk at capexhelp@njta.gov.

Sincerely,

David M. Siegler, P.E.
Contracts Manager

Select PSPQ Specialty Code Descriptions

A600 Program Management

Program Management includes services to assist the Authority in the management, oversight, coordination, and reporting of activities required during the design and post-design phases of a Program which may comprise multiple design firms as necessary to complete a relatively large scale of work. Program Management services include functioning in some capacity as an extension of the Authority staff handling a wide range of activities and issues on behalf of the Authority, as directed by the Authority.

A098 Bridges: Complex

The firm has led and completed the design of a complex vehicle, transit, or rail bridge with a main span greater than 500 feet and multi-span approach structures, constructed or in construction within the last ten years. The firm's work involved the preparation of final plans, erection plans, and specifications in accordance with AASHTO Load Resistant Factor Design Standards, applicable industry recommendations and guidance, as well as project-specific design criteria. The firm's responsibilities included the development of design schedules, anticipated construction schedules, and detailed construction estimates for the complex bridge work.

C700 Resilience Planning and Engineering:

Resilience Planning and Engineering includes services to assist the Authority in assessing, planning, and implementing measures that enhance the resilience of transportation infrastructure against climate-related, environmental, and operational hazards. Services may include vulnerability and risk assessments, climate data analysis, integration of resilience considerations into planning and design processes, and development of resilience standards and guidelines. The firm's work may involve coordination with multiple divisions and external agencies, as well as the use of geospatial tools, modeling, and data visualization techniques to inform decision-making. The firm should demonstrate experience with FHWA resilience guidance, adaptation planning, and infrastructure risk management.

C701 Sustainability and Energy Management:

Sustainability and Energy Management includes services to support the Authority in developing, implementing, and monitoring sustainability initiatives that reduce environmental impacts, improve operational efficiency, and support long-term economic and social goals. Services may include sustainability program development, greenhouse gas accounting, renewable energy planning (solar, electrical vehicle charging, fleet electrification) resource efficiency assessments, waste reduction and recycling, and sustainability reporting. The firm's work may involve alignment with the Authority's Strategic Plan, Envision framework, and State or Federal sustainability initiatives. Experience with sustainability metrics, life-cycle cost analysis, and implementation of sustainable transportation infrastructure projects is required.
